

CLAIMS

1. Trouser hem height maintenance device, characterised in that it comprises a collar (1, 10) surrounding the bottom of a user's leg, the rear part of the collar (1, 10) having securing means (8; 15, 16; 17, 18; 19; 20) arranged to hold and fix the trouser hem.
2. Device according to claim 1, characterised in that the collar (1; 10) has adjusting means (5; 12) designed to adapt its length.
3. Device according to claim 1, characterised in that an intermediate part (6; 13) is inserted between the rear of the collar (1; 10) and the securing means (8; 15, 16; 17, 18; 20).
4. Device according to claim 3, characterised in that the intermediate part comprises adjusting means (1¹, 14) designed to adapt its length.
5. Device according to claim 1, characterised in that the collar (1) and/or the intermediate part (6) are in the form of a strip of fabric.
6. Device according to claim 5, characterised in that the strip of fabric is elastic.
7. Device according to claim 1, characterised in that the collar (10) and/or the intermediate part (13) is in the form of a chain.

¹ *Translator's note:* There appears to be a typing error in the original, as the collar itself is numbered 1.

8. Device according to claim 1, characterised in that the securing means (8) comprise a "Velcro" type adhesive pad.

9. Device according to claim 1, characterised in that the securing means (15, 16) comprise a pin cooperating with a disc.

5

10. Device according to claim 1, characterised in that the securing means (17, 18, 19) comprise a magnet cooperating with a metal counterpart.

11. Device according to claim 1, characterised in that the securing means (20) comprise a clip.
